

Think Safety First

VWAY is creating a safe world

VWAY

Vision

WWAY create a safer world with the world's leading systems and software safety technologies.

WWAY considers safety the best value and provides system and software safety technologies and services for a safer world.

Core Strategy

We provide 3P-based end-to-end services.

We provide innovative technologies based on AI and Big Data.

3P: Product Technology, Process Consulting, People Training

Core Value 4T

Think New idea
Try Innovative challenge
Toil Ardent effort
Trust Trust-giving company

Business Field

Process

We provide process consulting based on global standards by industry

Automotive ISO 26262	Robot ISO 13482	Railways IEC 62279, EN 50126
Medical IEC 62304	Industry General IEC 61508	Manufacturing IEC 61511
Aviation DO-178C	Nuclear IEC 61513	Quality control CMMI, ASPICE, SP

Product

We provide tools for system and software safety engineering through AI-based Digital Transformation technology.

- Safety Management Solution
- Safety Analysis Solution

People

We provide training for system and software safety professionals.

Practical Training: safety manager training, safety analysis training, safety test training
Qualification Training: Automotive functional safety engineering qualification training, SW safety professional qualification training, AI safety professional qualification training

Process Consulting

Process Consulting

We provide process consulting and certification services based on global standards for various industries.

Automotive ISO 26262

Aviation DO-178C

Medical IEC 62304

Robot ISO 13482

Nuclear IEC 61513

Railway IEC 62279, EN 50126

Manufacturing IEC 61511

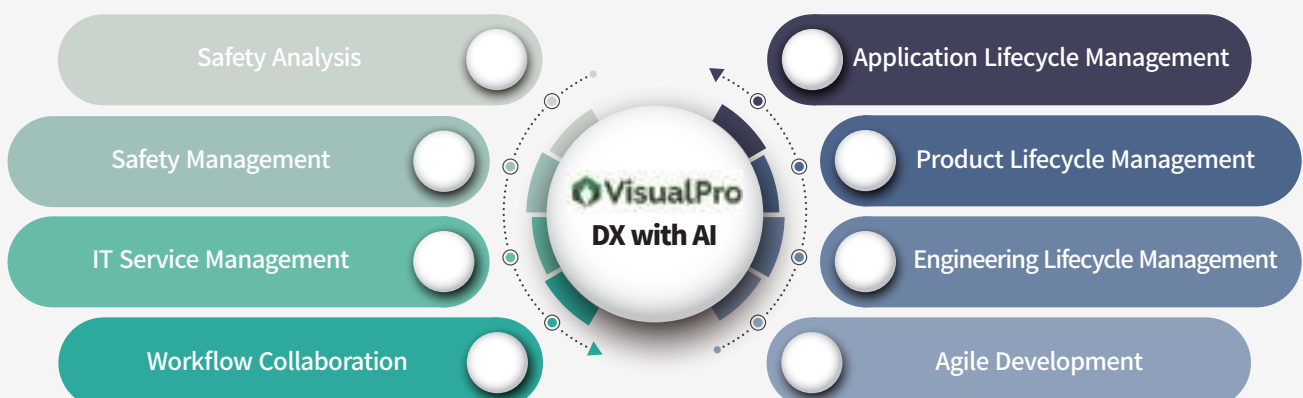

Industry general IEC 61508

Quality Control CMMI, ASPICE, SP

Product Technology

We provide an End-to-End Digital Transformation Platform that supports a variety of work environments.

Product Technology

VisualPro • Safety Management Solution

VisualPro SMS(Safety Management System) supports safety managers to establish and manage safety plans, analyze risk sources, and manage risk countermeasures based on the safety lifecycle.

Safety management activities can be performed by supporting safety standards such as industry standards IEC 61508, ISO 26262, and IEC 62304.

Establish a safety plan

Hazard identification

Risk management

Safety assessment management

Safety dashboard

Regulatory compliance

VisualPro • ALM Solution

VisualPro ALM (Application Lifecycle Management) accelerates product development and supports the creation of a digital work environment for productivity and quality management.

VisualPro is an end-to-end engineering solution that supports the entire stage from planning through requirements analysis, design, testing and release.

VisualPro supports global standards demanded by industries such as automotive, medical, aerospace, and rail.

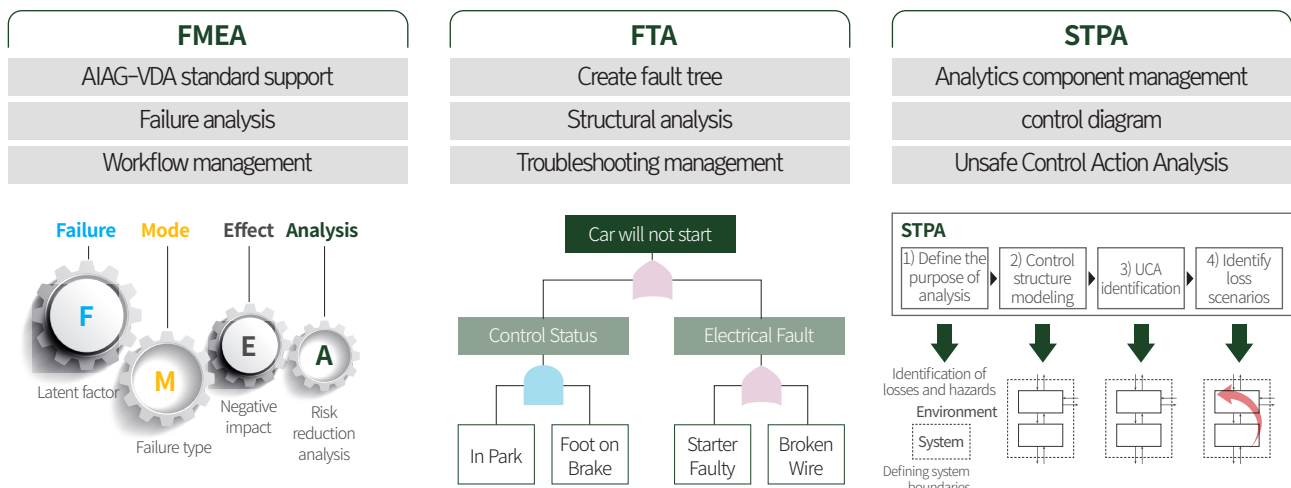

Based on the establishment of standard processes and templates, you can efficiently perform standards and regulatory compliance and respond to related certifications.

VisualPro • Safety Analysis Solution

VisualPro SA (Safety Analysis) supports a safety analysis environment for safe and reliable product development and operation. VisualPro provides integrated safety analysis based on STPA as well as FMEA and FTA, and suitable analysis methods can be applied according to product characteristics.

Additionally, machine learning AI can be used to automate data-driven failure analysis and risk assessment to perform efficient and consistent safety analysis.

People Training

People Training

We provide system and software safety practice and certification education through VWAY CAMPUS and Software Safety Technology Association.(SWSA)

VVAY CAMPUS

(사)소프트웨어안전기술협회
Software Safety Technology Association

Practical Training

Safety manager training
Safety analysis training
Safety test training

Qualification Training

Automotive Functional Safety
Engineering Qualification Training
SW Safety Expert Qualification
